AIG

Summer 2016

Please give a brief description of your duties.	What value do you feel you added to the organization during your internship?	Did this internship meet your expectations? Why or why not?
As an actuarial intern, my job responsibility is to improve the financial statement, enhance the delivery of the data from CFO teams to our data warehouse.	Diversity. I was put in a group where consists of not only actuaries, but also CPA, CFA and MBA. As an actuarial intern, I feel that I brought different skills set as an actuary and contribute to this team.	Mostly yes. I have learned to build models based on raw data and solidified my excel skills. I also expanded my insurance knowledge as well as skills that are needed to become an actuary through working on these projects. But since I wasn't in a traditional actuarial team instead my team focuses more on the finance side, I had learnt a lot of knowledge of accounting and finance as well, which was not something that I expected.

Would you recommend this internship to another student? Why or why not?	If you could change one thing about your internship experience, what would it be and why?	Please provide any additional information regarding your internship that you feel students should know.
Definitely. I would say that AIG really provided interns great experience and our managers assigned us interesting and challenging projects that enable us to learn how the industry works and what an actuary does on a daily base.	I would like to have more out of work activities. Since most of us are new to the city that we were located in. It would be nice that we can have more social gathering and get to know each other more since most of the interns are seperated into different buidlings and floors.	I would recommend to learn more knowledge of the industry that you are working for. It not only prepared you a general idea how your industry functions but also make a transition to your work easier.
