

Amazon

Summer 2017

Please give a brief description of your duties.	What value do you feel you added to the organization during your internship?	Did this internship meet your expectations? Why or why not?
I worked as a Business Intelligence Engineer under Supply Chain and work on data extraction, data analysis, and modeling.	The project I worked on will be a three-year project which eventually can be used by many teams to evaluate their simulation and offer business insights.	Yes, I learned a lot, both soft skills like communication and hard skills like programming during my internship. Those skills will be valuable when I look for full-time jobs.
Would you recommend this internship to another student? Why or why not?	If you could change one thing about your internship experience, what would it be and why?	Please provide any additional information regarding your internship that you feel students should know.
Yes, Amazon is developing very fast and there are a lot of great people here. It is a good place to learn from other people.	I wish I could be more positive and creative from the beginning. Then I would have more insights about my project and I can accomplish it better.	Learning how to get along with managers and co-workers is the most important thing to learn.
