

Austin Police Department – Forensic Science Division

Fall 2018

Please give a brief description of your duties.	What value do you feel you added to the organization during your internship?	Did this internship meet your expectations? Why or why not?
During this internship, I worked on a project uploading photo files of latent prints to a crime scene database for future use and learned various fingerprinting techniques. "	I completed a project for my section that they had been meaning to do for a long time, so I was able to be useful to the section in a very direct way.	Yes, I got some basic forensic science experience and met some really hard-working people.
Would you recommend this internship to another student? Why or why not?	If you could change one thing about your internship experience, what would it be and why?	Please provide any additional information regarding your internship that you feel students should know.
Definitely! Even if you aren't into Latent Prints specifically, you can choose another forensics section to intern with and get some valuable experience that way.	I would want there to be more time so I could spend more time with the other sections around the division.	I think that even if you have slow days at the internship where not much is going on, you could turn it into a learning experience by engaging in a conversation with your coworkers about their jobs or by doing your own research.
