

Behavioral Science Lab

Fall 2017

Please give a brief description of your duties.	What value do you feel you added to the organization during your internship?	Did this internship meet your expectations? Why or why not?
Competitive analysis, coding qualitative research output, client interfacing	Coming from a behavioral research background, I am adept at coding qualitative research and understanding its output. Most of my undergraduate career I spent working in research labs on campus with the intent to become an academic researcher, and it's good to know that these skills are applicable to industry as well.	This internship exceeded my expectations. I was encouraged to take a more active role in the company than I anticipated and am being brought on for a paid position. Being acknowledged for contributing to a company that I think has so much value was really rewarding.
Would you recommend this internship to another student? Why or why not?	If you could change one thing about your internship experience, what would it be and why?	Please provide any additional information regarding your internship that you feel students should know.
I would absolutely recommend working at Behavioral Science Lab to another student. The three founders have all had incredible careers and they want to help you succeed. When I started at BSL they essentially gave me an overview of all possible roles I could fill and asked me where my interests were. This experience was meant to further my career and interests, and their networks are invaluable.	If I could change one thing about my internship, I wish I could have participated in collecting qualitative research this semester, but unfortunately all data collection occurred out of town.	This is the best internship experience I had in four years at UT.
