

# Boundless

## Fall 2018

Please give a brief description of your duties.	What value do you feel you added to the organization during your internship?	Did this internship meet your expectations? Why or why not?
<p>As an intern I worked on implementing features and fixing bugs across several web applications. This involved work in HTML/CSS, JavaScript, Groovy, Angular, and MySQL.</p>	<p>Because the other developers worked on project sprints I was able to provide a lot of help in getting bug fixes out quickly and implementing features that had been in the development queue for some time because they weren't aligned with any particular sprint.</p>	<p>Yes, they gave me just the right amount of freedom and guidance. I feel like I have learned so much about working with a production code base, version control, servers, and development work.</p>
Would you recommend this internship to another student? Why or why not?	If you could change one thing about your internship experience, what would it be and why?	Please provide any additional information regarding your internship that you feel students should know.
<p>Of course! I only had a little experience in web development and no experience working with a production code base, and they were totally okay with that! It was a great way to start getting into technical internships since the team is pretty small. They also does a decent amount of company-sponsored events outside the office - whenever a marvel movie comes out we got to watch it as a team! There's also</p>	<p>The developers work a kind of strange schedule, so I usually get to work at 7:30 am. I have gotten used to it by now, but it is different than the typical college student's schedule.</p>	<p>N/A</p>
