

## Dun & Bradstreet

### Summer 2016

Please give a brief description of your duties.	What value do you feel you added to the organization during your internship?	Did this internship meet your expectations? Why or why not?
<p>Main focus was behind REST web application.</p> <p>PHP, JavaScript, and SQL knowledge is necessary.</p> <p>All work that it is assigned to you, if done correctly, it will go all the way into production actually making an impact to the company's software and goals.</p>	<p>I feel I added a sense of open communication and collaboration which enable everyone, interns and full time employers, to work together and accomplish similar goals.</p>	<p>Yes. Every expectation of the internship was met.</p> <p>I had a great mentor that assisted me in any issues I got stuck with. There were always assignments for me to do, I never had a dull moment which means that the learning and the experience was given to me by the second. Finally, they did a great job at including the interns with their regular schedules and team meetings which made it feel like we were actually on the team.</p>
Would you recommend this internship to another student? Why or why not?	If you could change one thing about your internship experience, what would it be and why?	Please provide any additional information regarding your internship that you feel students should know.
<p>Yes. It is surely a lot of work and you are expected to work in an agile environment. However, if hardwork and self-dedication are two of your characteristics then you will surely enjoy it.</p>	<p>I wish they would have tested our laptops before our arrival. There was a day where my laptop was troubleshooted for a whole day due to some set up difficulties.</p>	<p>Dun &amp; Bradstreet surely follows the rule of the 3 P's / People, Process, and Product. Surely a place where one could call their full time job in the future.</p>
