

IBM

Summer 2016

Please give a brief description of your duties.	What value do you feel you added to the organization during your internship?	Did this internship meet your expectations? Why or why not?
Enhance the GSA web tool GUI using frameworks such as HTML, CSS, JS, JQuery and Bootstrap.	The result of this project will be used by more than the 40% of the employees in the company since it is an internal tool that has not been modified for 10 years.	Yes it did. I was expecting to master new skills which I did and also to see how my project results would impact the company's business.
Would you recommend this internship to another student? Why or why not?	If you could change one thing about your internship experience, what would it be and why?	Please provide any additional information regarding your internship that you feel students should know.
Yes. IBM is one of the most recognized technical and business companies in the world. They have a great internship program and IBM makes sure that the project will have a global impact in the company and outside it.	It would be to hang out more with other interns. Working is great since you get to master new skills but networking can be sometimes more important because you get to meet smart students that will have a bright future. You always need to hang out more with coworkers outside work in order to create a better environment.	IBM is a great company because of the projects that they give you and the teams that you get to work with.
