

## Schlumberger

### Summer 2016

Please give a brief description of your duties.	What value do you feel you added to the organization during your internship?	Did this internship meet your expectations? Why or why not?
<p>I had to create two programs to gather data from regression tests of a software named PIPESIM and display the data for the software users. I made two programs for my whole internship. I also had to attend team meetings to update them on my project. I had to make presentations for my work to get feedback for improvement for my whole team. I had to make a final presentation for my full project in front of HR representatives.</p>	<p>The only value that I can think that I added was learning a very convenient visualization tool for data display and sharing my knowledge on that tool to my coworkers for them to use.</p>	<p>This internship reached my expectations because I worked on a project that is actually useful to the company and that had challenging parts.</p>
Would you recommend this internship to another student? Why or why not?	If you could change one thing about your internship experience, what would it be and why?	Please provide any additional information regarding your internship that you feel students should know.
<p>I would recommend this internship to another student because the pay is really good and at least for me, my mentor had respect for me and gave me a good amount of responsibility for a relevant project for the company. I gained a lot of skills and accomplished something meaningful.</p>	<p>If I could one thing, I'd like to not have done a lot of work that ended being useless. The direction of my project stayed the same for the whole internship but what I produced in the 1st two weeks was rendered almost useless because it had to be replaced because of certain conflicts.</p>	<p>Students should know that Schlumberger is a company where coworkers are always willing to help and will pause their work to take time to help others at almost anytime.</p>
