## Summer 2016

Please give a brief description of your duties.	What value do you feel you added to the organization during your internship?	Did this internship meet your expectations? Why or why not?
N/A	I worked on optimizing a compiler and achieved a about 5x speedup	I think it does meet my expectation because the project I worked on was actually a heavily-optimized project so I expected that it would be hard for me to achieve a super significantly speedup but still I believed that there should be something that I could do about that and at least achieve something.
Would you recommend this internship to another student? Why or why not?	If you could change one thing about your internship experience, what would it be and why?	Please provide any additional information regarding your internship that you feel students should know.
I would because on one hand, I think this internship is pretty hardcore and challenging while on the other hand, I got a lot of help and also learned a lot from people around. And also there are a lot of interesting intern events and a competitive pay.	I would prefer my mentor and I are in the same office, because sometimes it is not super convenient for us to talk because we are about half an hour drive from each other	I would say the project is more important than the company's name but lots of people are chasing big names or so-called "hot startups".
