

Carlisle Construction Materials

Fall 2017

| Please give a brief description of your duties. | What value do you feel you added to the organization during your internship? | Did this internship meet your expectations? Why or why not? |
|---|---|--|
| <p>My job was to develop a predictive model using machine learning analytics to predict when defects during production would occur so that corrective action could be taken.</p> | <p>I believe I started the company's journey into implementing machine learning techniques.</p> | <p>This internship exceeded my expectations. I thought that I wouldn't learn too much this summer, but I actually gained a lot of knowledge that I will be able to use in my future endeavors.</p> |
| Would you recommend this internship to another student? Why or why not? | If you could change one thing about your internship experience, what would it be and why? | Please provide any additional information regarding your internship that you feel students should know. |
| <p>I would recommend this internship because it requires you to be able to solve problems on your own while also requiring that you learn new skills and techniques that cannot be taught in the classroom.</p> | <p>It would be beneficial if there were more people in the company that worked on what I was working on so it wouldn't be as difficult to find help with a problem.</p> | <p>Do some research into machine learning before you arrive, maybe even try some examples on your own computer with some sample data.</p> |
