

FRI – Supramolecular Sensors Stream

Spring 2018

Please give a brief description of your duties.	What value do you feel you added to the organization during your internship?	Did this internship meet your expectations? Why or why not?
<p>I mentored the Wednesday night lab session, from 4-8 This involved teaching the students general research laboratory techniques.</p>	<p>I think the students find me easy to approach, because I struggled a lot in this lab at first. I was able to help many of them with their papers and assignments.</p>	<p>Yes. I have always enjoyed working in this FRI lab. I like the hands on aspect of helping others who were in the same place I was.</p>
Would you recommend this internship to another student? Why or why not?	If you could change one thing about your internship experience, what would it be and why?	Please provide any additional information regarding your internship that you feel students should know.
<p>Absolutely, teaching others is a way to ensure that you know the skills. The skills I have learned in this lab are ones I can apply to many of the jobs I have been applying to recently.</p>	<p>I do not think I would change anything. I have one of the best RE's I could ask for. She is extremely supportive of her mentors and students both in the lab and outside of it.</p>	<p>I think mentoring for FRI has been one of the most beneficial experiences in my time at UT</p>
