## Summer 2017

Please give a brief description of your duties.	What value do you feel you added to the organization during your internship?	Did this internship meet your expectations? Why or why not?
<p>Software Engineer Intern: Develop fast, reliable and scalable engineering solutions to help people get jobs, work on an intern project over the summer, and own it from start to finish.</p>	<p>While working on both my intern project, as well as other tasks I was assigned, I felt almost like a full time employee — the work I did was not only relevant, important and respected, but at the same time, was critiqued like any other employee’s work.</p>	<p>The internship definitely met my expectations — I got to work completely integrated within a company among some extremely smart and experienced people, and got a chance to not only lay my hands on, but also, develop advanced technical solutions.</p>
Would you recommend this internship to another student? Why or why not?	If you could change one thing about your internship experience, what would it be and why?	Please provide any additional information regarding your internship that you feel students should know.
<p>I would definitely recommend this internship to another student — this internship includes a great learning and working experience at one of the most technologically focused and rapidly advancing search companies in the world.</p>	<p>I would definitely love to be more involved in the product decisions of the company and understand how engineering solutions affect the product more closely!</p>	<p>Indeed is a great company which treats its interns very respectfully and tries to assign a project to them which is both interesting to them, and makes an actual impact on the company.</p>
