

## NASA

### Fall 2018

Please give a brief description of your duties.	What value do you feel you added to the organization during your internship?	Did this internship meet your expectations? Why or why not?
I was in charge of two independent projects. First, I was to establish a method for producing sterile plants to test custom microbes for plants. Second, I tested different known bacterium for plant growth promoting potential.	I feel that I jump started the processes that will help NASA go beyond low earth orbit and begin to establish continuous agricultural habitats.	Yes, it met the expectation in most regards. However, I did expect to be given more work than was offered. It had a very self-driven aspect.
Would you recommend this internship to another student? Why or why not?	If you could change one thing about your internship experience, what would it be and why?	Please provide any additional information regarding your internship that you feel students should know.
Yes I would due to the valuable connections gained and the prestige when applying to future jobs.	I would hope to receive more direction rather than simply be told to come up with my own project.	This internship was very self-driven and required much input on the student's part to achieve applicable experience.
