

Reliant Immune Diagnostics

Spring 2018

Please give a brief description of your duties.	What value do you feel you added to the organization during your internship?	Did this internship meet your expectations? Why or why not?
I helped them conduct lab and clinical trials to test the accuracy of their diagnostic tool. I also helped them write the FDA paperwork.	I think I helped them work more efficiently and I think I also helped provide some good ideas to help the company.	Yes. I learned a lot and got to apply a lot of lab skills. I also got to interact with patients that were being used for clinical studies.
Would you recommend this internship to another student? Why or why not?	If you could change one thing about your internship experience, what would it be and why?	Please provide any additional information regarding your internship that you feel students should know.
Yes, it is a very fun internship and a great learning experience. All of the people are very nice and helpful.	The work schedule changed a lot during the course of the semester. I think it would have been better if I worked at the same time every week.	It is a little far away and driving there during rush hour is a pain.
