

Reliant Immune Diagnostics

Spring 2018

Please give a brief description of your duties.	What value do you feel you added to the organization during your internship?	Did this internship meet your expectations? Why or why not?
<p>I was in charge of running precision tests for quality control of a diagnostic application. This involved putting controls onto a drug test and using the application to analyze the drug test. I was also in charge of data entry and correction.</p>	<p>I feel like I was able to help speed along the FDA submission for the urinary tract infection function of the app. I did multiple 10-day studies which I feel allowed the entire project to go forward more quickly and with less problems.</p>	<p>No, there was a lot of disorganization near the end of the internship with many days where my tasks were very menial. It seemed as if problems with previous tests prevented interns from going forward with new ones.</p>
Would you recommend this internship to another student? Why or why not?	If you could change one thing about your internship experience, what would it be and why?	Please provide any additional information regarding your internship that you feel students should know.
<p>Yes, regardless of the disorganization, the people and product are something I'm proud to have been a part of.</p>	<p>I would have a schedule made in advance with specific duties for interns to complete, so that there is no running behind schedule and they don't run out of things for students to do.</p>	<p>N/A</p>
