Please give the name of the company that you interned for, as well as a brief description of your duties	What value do you feel you added to the organization during your internship?	Did this internship meet your expectations? Why or why not?
Microsoft Corporation, Program Manager Intern. I had to develop and design a dashboard to keep track of operating system convergence across all the windows products (Windows, Server, Xbox, Surface Hub, IoT, HoloLens and Phone).	I believe this tool will be useful to spread out work across "the org" (Windows and Devices Group). The issue they have at hand is an extremely difficult one and requires a lot of hard work and dedication.	It did on some respects and it didn't on others. First off, I want to say that interning at Microsoft is an amazing experience. You get to see scale in a way you wouldn't be able to anywhere else (at least in the Windows team).
Would you recommend this internship to another student? Why or why not?	**If you could change one thing about your internship experience, what would it be and why?**	**Please provide any additional information regarding your internship that you feel students should know.**
Yes. You will learn a lot from working at a company like Microsoft. It deals with scale and software in a way unique to most other software companies. This is mostly because of how old a lot of the code is. Windows for example, has accumulated a code base	The on-boarding. While I understand that it won't be the easiest task, just because there's so many things to learn, it would help to have a clearer guide as to what to do.	If you ever feel thrown out by the scale, the terminology, or really anything, don't be afraid to ask. You will hear this time and time again, but it's extremely important.
