

# UT Southwestern Medical Center

## Summer 2017

Please give a brief description of your duties.	What value do you feel you added to the organization during your internship?	Did this internship meet your expectations? Why or why not?
<p>During this internship, I analyzed patient images using ImageJ to validate a measurement tool called VES (Vitiligo extent score). I also scheduled patients for research patients and interacted them and asked them to fill out questionnaires to gain important information for research with respect to quality of life studies.</p>	<p>I was able to use my past research skills to analyze images to possibly develop a better quantitative measurement for vitiligo and body surface area index scores.</p>	<p>Yes, I was able to work towards my own project and I interacted with dermatologists and medical students on a daily basis.</p>
Would you recommend this internship to another student? Why or why not?	If you could change one thing about your internship experience, what would it be and why?	Please provide any additional information regarding your internship that you feel students should know.
<p>Yes, it was very fulfilling and it felt great to contribute to research that will change the lives of many in the future.</p>	<p>I wish I had been able to communicate more with my PI to get a grasp of the studies faster since I would have been more efficient.</p>	<p>It is important to constantly ask questions since you are there to learn. Be an active listener and don't be scared to speak up to voice your opinions. You are there for a reason and your skills are valuable, so never question that.</p>
