

VirtualMGA

Fall 2018

Please give a brief description of your duties.	What value do you feel you added to the organization during your internship?	Did this internship meet your expectations? Why or why not?
As a Configuration Analyst Intern, my duties included writing JavaScript scripts, debugging, mapping variables and building up individual product structures	I met the target deadlines for my projects, and was versatile enough to help out in other tasks (especially with debugging) when the need arose.	It met my expectations. I didn't have any internship related to my major prior to this one, and I feel like I have a better grasp of the industry and what I want to do in it in the future.
Would you recommend this internship to another student? Why or why not?	If you could change one thing about your internship experience, what would it be and why?	Please provide any additional information regarding your internship that you feel students should know.
I would recommend it as long as they have good time management. From west campus the commute is a good half an hour drive and it was hard at times to balance work with attending classes. I would also recommend that other students also consider whether they would like to work in insurance.	I wish I'd been more involved. I finished/on track to my allocated projects on time but I feel like I could've gotten more involved and learned more by asking more questions.	N/A
