

Visa

Summer 2017

Please give a brief description of your duties.	What value do you feel you added to the organization during your internship?	Did this internship meet your expectations? Why or why not?
<p>Visa, Software Engineering Intern, helped with various projects needed by the VIP Network Processing team, such as system utilities or bug fixes.</p>	<p>I added some solid pieces of software as well as ushered in a helpful way of thinking about certain problems, eg. using more open-source software</p>	<p>I expected more coding responsibility and meatier projects, but as an intern you can only have so much real responsibility.</p>
Would you recommend this internship to another student? Why or why not?	If you could change one thing about your internship experience, what would it be and why?	Please provide any additional information regarding your internship that you feel students should know.
<p>It was a fun and positive experience, and is necessary for any student in computer science to have at least one internship so they understand what a full-time job actually entails</p>	<p>I would possibly ask to be put on a team more relevant to my interests; I only got to work on projects I found fun towards the end</p>	<p>The work culture is pretty good, but there is a sense of loyalty (most engineers have been there for at least 3-4 years) that may give mixed signals to potential hires.</p>
