Summer 2017

Please give a brief description of your duties.	What value do you feel you added to the organization during your internship?	Did this internship meet your expectations? Why or why not?
I was a software engineering intern and worked on writing, testing, documenting, and deploying an API in addition to implementing the features it exposes into an already deployed system.	Along with other interns we were able to build a feature that is relevant to the company and will actually be used and seen by real customers. Since this intern program is relatively new, I also think that our experience and feedback will leave a lasting impact on future iterations of the program.	It did meet my expectations, yes. I was able to learn a lot about writing and maintaining code in a real work environment and learned a lot of both technical and non-technical knowledge. I think that the skills that I acquired will be helpful in the future both in an educational and work setting.
Would you recommend this internship to another student? Why or why not?	**If you could change one thing about your internship experience, what would it be and why?**	**Please provide any additional information regarding your internship that you feel students should know.**
I would recommend this internship to another student as it allows one to learn and grow a lot. The company isn't a gigantic corporation nor is it a new startup, so it hits a sweet spot between the two. You will learn a lot, but not at the expense of enjoying the experience!	If I could change one thing about the experience, I would have tried a greater variety of positions that the company provides.	None
