## Summer 2017

Please give a brief description of your duties.	What value do you feel you added to the organization during your internship?	Did this internship meet your expectations? Why or why not?
<p>I was a software engineer intern that worked across all responsibilities from back-end support, front-end implementation, and UI/UX design. Most of the work is web-based since we are an online service company. There are also digital marketing opportunities which I did not pursue given the amount of work I have.</p>	<p>It's a small stable startup. I was given a lot of responsibilities. The cool part of my team is they also trusted me a lot to allow myself lots of discretion over design decisions. Software design decisions usually have lasting effects for perpetuity, and as I believe I have made some good decisions myself, that's really something I have contributed to my company. It is a win-win, because not every day you get the opportunity to work for a place that you can put out code in production within a month.</p>	<p>Yes (and no for only a small reason). I've learned tremendously throughout the course of my work, much of the things missing in college curriculums. New technologies, practical solutions, time management, communication, actual hands-on projects are just to name a few. I've felt like an actual engineer ready to work full-time now. The only part I wish were a part of my internship is to have more technical challenges so that I can not only learn about the practical skills but also explore some more edgy topics in the CS field like machine learning.</p>
Would you recommend this internship to another student? Why or why not?	If you could change one thing about your internship experience, what would it be and why?	Please provide any additional information regarding your internship that you feel students should know.
<p>Yes if you are self-driven and wants to have really close relationship with your team and your products. It is a small team so you can never just brush over something you've done wrong or you've missed. I could only see through one big product over the three months I've worked here. It's a huge feature but it's very rewarding to see your 'own' work out there being used by real people. It is also remote, so time management is a big factor in the workflow. Procrastination and overworking are equally possible in this kind of setting, surprisingly.</p>	<p>Like I said previously, I wish I could learn more of the 'theoretical' stuff. Having a chance to conduct real life applications of the most forefront technologies in the CS would be a great experience to make contribution to the field and the company.</p>	<p>Enjoy your time! I was really stressed out in fear of not delivering work to the standards of the company. It turns out I am just a perfectionist and compromises are real in the work field. Have no fear, ask questions, and just do your best!</p>
