

## Fujitsu Network Communication

Spring 2016

Please give a brief description of your duties.	What value do you feel you added to the organization during your internship?	Did this internship meet your expectations? Why or why not?
<p>I worked in Fujitsu Network Communication as a Software Engineer intern. My job is to implement new functions on the automation testing framework. Also I need to fix any user reported issues in our framework.</p>	<p>During the internship, I fixed multiple issues in the framework and kept my connection with the team which I'll work with after I graduate. I contribute a significant amount of code to the framework such as new testing mode and enhanced command line interface.</p>	<p>Yes, I am able to keep up with the team and learn the latest progress of the project that I worked with my colleague since last summer.</p>
Would you recommend this internship to another student? Why or why not?	If you could change one thing about your internship experience, what would it be and why?	Please provide any additional information regarding your internship that you feel students should know.
<p>Yes, the workload is totally manageable during school year and I learn a lot of programming knowledge from the internship. I'm able to use knowledge from my class to help making the framework better.</p>	<p>Find a more quiet place to work on campus. About 50% of the time I worked in one of the building in the middle of campus, which is always crowded and noisy. I can barely hold meeting with my colleagues via phone.</p>	<p>Once you start to work part-time as a programmer and a CS student, you'll find yourself looking at the monitor about 8 hours a day, make sure you have a good work-study-life balance.</p>
