

## National Instruments

### Spring 2016

Please give a brief description of your duties.	What value do you feel you added to the organization during your internship?	Did this internship meet your expectations? Why or why not?
My responsibilities were to implement the software to enable a new line of Digital Multimeters to perform specialized measurements, as well as support "simulated" measurements.	I was able to contribute to a product that has a real business need, and where customers will be using my code.	Yes, it was my fourth internship with the company, so there weren't really any surprises.
Would you recommend this internship to another student? Why or why not?	If you could change one thing about your internship experience, what would it be and why?	Please provide any additional information regarding your internship that you feel students should know.
Yes, I enjoyed the team I got to work with, and the code-base was not difficult to get used to.	Nothing comes to mind.	Only the best and brightest work at National Instruments!
