

## Softlayer

### Spring 2016

Please give a brief description of your duties.	What value do you feel you added to the organization during your internship?	Did this internship meet your expectations? Why or why not?
I interned at SoftLayer, an IBM company as a Software Engineering Intern. My responsibilities were to develop scripts to monitor SoftLayer private cloud using Sensu monitoring framework.	Since I was developing scripts to monitor SoftLayer private cloud, I feel I helped the organization to make its service more secure.	Yes, this internship met my expectations of gaining practical cloud computing experience. My manager assigned me real issues that other software engineer could have worked on.
Would you recommend this internship to another student? Why or why not?	If you could change one thing about your internship experience, what would it be and why?	Please provide any additional information regarding your internship that you feel students should know.
Yes, I would definitely recommend this internship to another student. It is a great opportunity to gain cloud computing experience.	I would not change one thing about my internship experience. My manager and co-workers made me feel part of the team since the beginning. In addition, I was working on real software engineering issues.	There were free snacks.
